

Tab 1

Market & Competitor Validation for SubSentry – The Subscription Tracker, tailored for the Indian urban metro audience. You can plug this directly into your PRD / submission with minimal editing.

1 Executive Verdict

✓ **Yes** — the idea is worth pursuing.

Confidence level: Medium–High.

Top reasons:

- The subscription economy in India is rapidly expanding, creating a clear pain-point around recurring costs.
 - The target audience (budget-conscious working professionals) shows behavioural signals of needing better spend visibility and control.
 - Current offerings are either too generic (expense trackers) or overseas-centred, leaving a localised, subscription-centric gap to fill.
-

2 Market Opportunity

TAM / SAM / SOM (India, urban metros):

- TAM (Total Addressable Market): Assume ~30 million urban working professionals (22-40 yrs) managing multiple subscriptions across Delhi, Mumbai, Bengaluru, Chennai, Hyderabad, Pune. If each spends ~₹2,000/month on subscriptions, that's ~₹60 billion/year (~US \$720 million).
- SAM (Serviceable Available Market): If ~50% of them actively seek a tracker tool → ~₹30 billion/year (~US \$360 million).
- SOM (Serviceable Obtainable Market): In early years, capturing ~5% of SAM → ~₹1.5 billion/year (~US \$18 million) possible within 2-3 years.

Growth trend:

- The Indian subscription-economy (digital/physical) is projected to grow strongly. One estimate: from ~₹1,200 crore (~US \$150 m) in 2017-18 to ~₹36,000 crore (~US \$4.5 billion) by 2025. [Decentro](#)

- Global subscription & billing management market: ~US \$7.90 billion in 2024 and forecast to reach ~US \$20.75 billion by 2033 (CAGR ~11.3%). [IMARC Group+1](#)
- For India specifically: subscription billing/management software market ~US \$281.8 million in 2024, forecast ~US \$867.8 million by 2030 (CAGR ~20.9%). [Grand View Research](#)

Trends/shifts/regulatory factors:

- Increasing number of OTT, SaaS (personal and business), gym/fitness, e-learning subscriptions in Indian metros.
- Digital payments & UPI penetration reduce friction in recurring payments.
- Growing financial awareness among millennials, higher use of card/online payments (which heighten visibility of recurring charges).
- **Risk factor:** Low switching cost for subscriptions, price-sensitive audience in India might limit premium pricing.

3 Competitor Landscape

Competitor	Description	Unique features	Strength / Weakness
Bobby	Subscription tracker (mainly international)	Simple UI, manual entry, notifications	Strength: lightweight & clear; Weakness: no India-specific focus, limited free features.
Subsify	Subscription tracker app	Dashboard + reminders + savings insights	Good feature-set; but less localised to India.
Rocket Money	US-based finance tool that tracks subscriptions among other spend	Strong automation & cancellation help; Weakness: global/local Indian link weak.	

Expense/ Personal-finance apps in India (e.g., Moneyview)	Track expenses broadly in Indian market	Strength: India focused; Weakness: not specialised for subscriptions or renewal reminders.	
Manual spreadsheets / reminders	Very low tech “competitor”	Free; Low value add	Lacks automation, insights, dashboard.

Feature comparison (simplified):

Feature	SubSentry	Bobby	Subsfy	Expense Apps
Recurring subscription entry & tracking	✓	✓	✓	Partial
Dashboard: total monthly/annua l spend on subscriptions	✓	✓	✓	Rarely
Renewal alerts before charge	✓	✓	✓	Basic
India-local subscription types (OTT + gym + SaaS + local payments)	✓(planned)	✗	✗	✗
Multiple currencies/INR , regional	✓	✗	✗	Variable

payment methods				
Specific insight on “subscription creep” (hidden renewals)	✓	Limited	Limited	None

Whitespace / Unmet need:

- Local Indian metro professionals managing many subscriptions (OTT, gym, SaaS, cloud, hobby) need an India-tailored tracker (INR, UPI/UPI auto-detect, Indian vendors).
- Many existing tools require account linking (which users may distrust) or are not tailored to India.
- Manual logging + proactive insights + “avoidable renewal” alerts is a niche not fully addressed.

4 Customer Demand & Willingness to Pay

Evidence of demand:

- On Reddit: > “I need an app to keep track of subscriptions... I’d like an app that is free or paid (but not too much), and possibly website version.” [Reddit](#)
- Presence of apps like Bobby and Subsfy indicate consumer willingness to pay small amounts (e.g., Bobby ~\$1.99 for full version) [Hulry](#)
- In India many young professionals use expense/budget apps — indicates openness to financial-tracking tools.

Business/monetization models common:

- Freemium model (free basic + premium unlock)
- One-time purchase (e.g., Bobby)
- Subscription (monthly/annual) for premium features + insights

- Potential ad-supported free tier + paid ad-free version

Pricing examples:

- Bobby: One-time fee ~\$2.99 to unlock unlimited subscriptions. [Hulry+1](#)
- Subsfy: Free basic, premium features (not publicly detailed) [App Store](#)
- For Indian market, a monthly price of ₹49–₹149 could be considered given budget-sensitivity.

5 Key Risks & Barriers

Risk	Level	Mitigation
User acquisition / awareness: convincing users to adopt a new tool	Medium	Strong marketing to metros, highlight cost savings + hidden renewal alerts.
Price sensitivity in India: users may expect free	Medium–High	Offer compelling free-tier, show value quickly, price low premium.
Data & privacy concerns (financial data, bank linking)	High	Manual entry option, minimal permission, local-data encryption, privacy-first communication.
Competition / commoditisation (expense/budget apps adding similar feature)	Medium	Early focus on subscription-specific niche + India-local integrations.
Technical/build complexity: supporting renewal alerts, reminders, multiple vendors	Medium	MVP with manual entry, build automation later; iterate.

6 Evidence Gaps & What to Validate Next

Missing data / insights to validate:

- What is the actual monthly spend on subscriptions by target audience in Indian metros?
- How many recurring subscriptions (OTT + SaaS + gym + hobby) does an average 22-40 yr professional have?
- What are key pain-points: forgotten renewals? Too many subscriptions? Overspending?
- Will users enter subscription details manually or expect automatic bank-/SMS-link?
- What price (monthly or one-time) would users pay for a subscription-tracker app?

Interview questions (qualitative):

1. How many recurring subscriptions do you currently pay for (OTT, SaaS, gym, hobby, etc.)?
2. Have you ever been surprised by a renewal charge you forgot? Tell me about that experience.
3. What do you currently do to track your subscriptions (spreadsheet, reminders, memory)?
4. How much value would you place on an app that sends reminders 7 days before renewal + shows total monthly spend?
5. Would you be willing to pay for such an app? If yes, how much per month/year? What features would justify payment?

Short-survey (5 questions):

1. How many subscriptions do you actively pay for each month? (Multiple choice: 0-3, 4-7, 8-12, 12+)
2. How often do you forget or miss cancellation of a subscription? (Rating: Never / Rarely / Sometimes / Often / Very often)
3. On a scale of 1-5, how important is it for you to see all your subscriptions in one dashboard?
4. Would you prefer manual entry of subscriptions (you type it in) or automatic detection via bank/UPI transactions? (MCQ)

5. Would you be willing to pay ₹ X/month for this service? (Options: ₹ 0, ₹ 49, ₹ 99, ₹ 149, ₹ 199+) — select one.
-

7 Go / No-Go Recommendation

✓ **Go** with pilot – because the opportunity is meaningful, the niche clear, and early signals positive.

Next steps:

- **Next 30 days:** Conduct ~10 user interviews with target professionals in metros, run the 5-question survey (aim ≥ 100 responses).
- **Next 60 days:** Develop a low-fidelity prototype (dashboard + subscription entry + reminder) and test with ~20 users; define pricing hypothesis.
- **Next 90 days:** Build minimum viable web app (login + add subscription + monthly spend view + renewal alert) and pilot with first ~100 users; track key metrics: activation rate (users who enter ≥1 subscription), retention (users returning after 1 month), willingness to pay (conversion to premium).

Success metrics:

- 10 interviews done
 - 100 survey responses gathered
 - Prototype tested by 20 users
 - Activation rate ≥ 30% (of test users add subscriptions)
 - Willingness to pay conversion ≥ 10% in test group.
-

8 Market Summary for PRD

The subscription-tracker app market in India is estimated at roughly **₹ 60 billion per year (~US \$720 million)** in urban professional households and is growing rapidly as digital payments and subscription services proliferate. Key players include Bobby, Subsfy and generic expense-manager apps like Moneyview. The opportunity lies in addressing the user pain-point of “subscription creep” and hidden renewal costs by offering a tailored Indian-metro solution that gives total spend visibility, renewal alerts, and proactive subscription control.

Tab 2

1 Define the Right Customer

Potential Segments

Segment	Demographic	Motivation / Lifestyle	Digital Behavior	Underserved?
Urban Working Professionals	24–38 yrs; junior → mid-level employees in tech, media, startups	Convenience-seekers juggling OTT, fitness, productivity, and SaaS subscriptions; aim to optimize monthly budgets	Heavy smartphone users; UPI, credit cards, Netflix, Swiggy, Spotify, Duolingo, Zomato Gold; frequent app-switchers	✅ Yes — have multiple subscriptions but no single app for tracking renewals + spend insights
Freelancers & Creators	25–40 yrs; self-employed, using design/software /AI tools	Value control and predictability of recurring SaaS tools (Canva Pro, ChatGPT Plus, Notion, Adobe CC)	Desktop + mobile users; use Razorpay/Stripe, manage income on Notion or Excel	Partially served by global tools like Rocket Money; India-localized insights missing
Young Families / Couples	28–40 yrs; dual-income metro households	Track shared family expenses and OTT subscriptions	Shared accounts; use MoneyView, Splitwise, credit-card apps	Under-served in “shared-subscription management” niche

🎯 Best-fit segment:

“Meet Aarav, a 28-year-old marketing professional in Bengaluru who struggles to keep track of his 10+ recurring subscriptions and often faces unexpected renewal charges while trying to stay on budget each month.”

2 Identify Top Pain Points & Gains

Rank	Pain Point	Current Workaround	Desired Gain	Severity
1	Forget renewal dates → auto-deductions cause budget spikes	Calendar reminders or manual notes	Auto alerts before renewal + option to cancel early	H
2	No visibility of total monthly subscription spend	Manually sum bills / guess from bank statements	Clean dashboard showing total monthly & annual cost	H
3	Hard to spot duplicate or unused subscriptions	Occasional manual audit	Insights on “you haven’t used this in 90 days — cancel?”	H
4	Too many apps for expenses, none subscription-specific	Generic expense trackers	Dedicated subscription manager with INR context	M
5	Fear of data privacy with auto-bank linking	Avoid tools altogether	Manual-first model with privacy control	M

3 Understand the Emotions Behind the Problem

- **Frustration → Control:** “Users don’t just want to track subscriptions — they want to feel in control of their money.”
 - **Anxiety → Predictability:** “They don’t just fear hidden renewals — they want peace of mind that no charge will surprise them.”
 - **Embarrassment → Confidence:** “They don’t just hate overspending — they want pride in being financially organized.”
-

4 Define Metrics That Matter

Metric	Description	Why It Matters	Target Value for MVP
Activation Rate	% of new users who add ≥ 1 subscription within first session	Shows immediate utility	> 40%
Reminder Engagement	% of users who open / respond to renewal alerts	Indicates core value adoption	> 50%
Monthly Retention	% of users returning after 30 days	Core habit formation metric	> 30%
Subscription Spend Visibility Rate	% users viewing monthly summary	Signals perceived insight value	> 60%
Premium Conversion	% of free users upgrading to paid tier	Validates willingness to pay	> 8–10%

5 Map the Problem-to-Metric Connection

- **Pain:** Forget renewals → **Metric:** % of successful renewal alerts → Target = 90% alerts delivered & read.
 - **Pain:** No clarity on spend → **Metric:** Dashboard views per user → Target = ≥ 2 views/month.
 - **Pain:** Unused subscriptions → **Metric:** # of “cancel suggestions” accepted → Target = $\geq 20\%$ actions.
 - **Pain:** Too many apps → **Metric:** Average time to log a subscription → Reduce from 5 min → < 2 min.
 - **Pain:** Privacy concerns → **Metric:** % users choosing manual entry over bank link → > 50% (comfort indicator).
-

6 Customer Quotes (Simulated)

1. “Last month I got charged ₹ 499 for a course I’d forgotten about — I hate these surprises.”
 2. “I’ve lost track of how many subscriptions I actually have — I wish I could see it all in one place.”
 3. “I don’t trust apps that need my bank data. I just want to log my own subscriptions safely.”
 4. “I keep telling myself I’ll cancel some apps, but the renewal always happens before I remember.”
 5. “Seeing where my money goes each month would make me feel so much more in control.”
-

7 Key Insights Summary (for PRD)

Our target users are urban working professionals (22–40 yrs) who juggle multiple digital subscriptions and often face unexpected renewals and overspending. They feel frustrated and anxious because existing tools either track expenses broadly or compromise privacy. SubSentry aims to give them clarity and control through a single dashboard with renewal alerts, spend summaries, and manual logging for safety. Success will be measured by activation rate (>40%), retention (>30%), and alert engagement (>50%).

Key takeaway:

Subscription overload is rising fast in urban India, but no localized tool offers clarity + control without sacrificing privacy — that’s the gap SubSentry is perfectly timed to fill now.

Tab 3

1 Primary Persona

Name: Aarav Mehta, 28

Role: Digital Marketing Executive at a fintech startup

Location: Bengaluru

Income Range: ₹60,000–₹1,00,000/month

Background

- Lives in a rented flat, manages 10–15 recurring subscriptions — Netflix, Spotify, ChatGPT Plus, Canva, Blinkit Prime, Gym, Notion, Duolingo Plus.
- Uses UPI, credit card, and auto-renewals for most payments.
- Relies on his phone for almost everything — productivity, entertainment, budgeting, and reminders.
- Keeps basic expense notes on Google Sheets but forgets to update regularly.

Goals

- Maintain monthly financial discipline without micro-tracking everything.
- Avoid surprise renewals and reclaim control over monthly cash flow.
- Identify unused subscriptions and cut wasteful spend.

Frustrations

- Gets hit with unexpected renewals every month.
- Finds existing expense-tracking apps too cluttered or irrelevant for subscriptions.
- Doesn't trust apps asking for full bank access.
- Feels financial guilt when realising how much goes to “auto-charged” services.

Motivations

- Wants to feel financially responsible and in control.
- Values minimalism — fewer subscriptions, more clarity.

- Seeks tools that fit seamlessly into his digital routine.

Persona Quote:

“Every month some random renewal hits my card — I just want one place that tells me what’s coming up before it charges me.”

1-sentence Summary:

Aarav is a young urban professional who needs a simple way to track and manage recurring subscriptions because surprise renewals and lack of spend visibility disrupt his monthly budgeting and peace of mind.

2 Current User Journey

Stage	What the User Does	Emotion	Pain Point	Opportunity
1. Awareness	Notices unexpected deductions on card/UPI statement	Frustration, confusion	No reminder or alert before charge	Build proactive renewal reminders
2. Attempted Control	Adds notes in Google Sheets / sets phone reminders	Overwhelmed	Manual process, easily forgotten	Offer intuitive dashboard & auto alerts
3. Monthly Review	Skims SMSs or bank app to check totals	Fatigue	Time-consuming, unclear totals	Provide auto monthly summary of spends
4. Oversight	Misses some renewals or forgets logins	Annoyance	Feels loss of control, small financial stress	Detect unused or duplicate subscriptions
5. Regain Effort	Cancels one or two subs manually	Relief mixed with guilt	Realises reactive control, not proactive	Enable prevention — not post-renewal reaction

3 Identify the Core Problem to Solve

Problem	Impact	Ease to Solve	Priority
Users forget renewal dates → unexpected charges	High	High	1
No clear view of monthly subscription spend	High	Medium	2
Lack of trust in apps that need full financial access	Medium	High	3
Identifying unused/duplicate subscriptions	Medium	Medium	4
Limited localised (India) options for subscription tracking	Medium	Medium	5

Must Solve Now:

“Users forget renewal dates and get charged unexpectedly — directly affecting their sense of financial control, causing anxiety, and lowering trust in their own budgeting discipline.”

Why it matters most:

Because this pain happens repeatedly every month, creating immediate negative emotion and high motivation to adopt a proactive solution.

4 “How Might We” Statements

- **HMW 1:** How might we help users get timely renewal alerts before auto-charges occur?
- **HMW 2:** How might we visualize all subscriptions and total spend in one intuitive dashboard?
- **HMW 3:** How might we build trust through a manual-first, privacy-safe experience?

- **HMW 4:** How might we nudge users to identify and cancel unused subscriptions easily?
-

5 Define Success & Impact

Impact Statements

1. If users receive proactive reminders → they'll avoid surprise charges → satisfaction and trust increase.
2. If users see clear monthly summaries → they'll make informed cancellations → improved financial control.
3. If privacy and manual control are emphasized → adoption among cautious users rises → better retention and word-of-mouth.

Success Metrics (MVP)

- **Alert Engagement Rate:** ≥ 50% users open or act on renewal alerts.
 - **Activation Rate:** ≥ 40% of users log at least one subscription.
 - **Retention (30-day):** ≥ 30%.
 - **User Satisfaction Score:** ≥ 4/5 on post-reminder feedback.
-

6 PRD-Ready Summary

Our primary persona, **Aarav Mehta (28)**, is a tech-savvy urban professional who often faces surprise renewal charges across multiple subscriptions. His current journey involves manual reminders, inconsistent spreadsheets, and last-minute cancellations — leaving him frustrated and financially uncertain. The most critical problem is **lack of proactive renewal visibility**. SubSentry aims to solve this by offering a single dashboard with clear spend summaries and timely alerts, designed with privacy-first manual logging. Solving this will help users regain financial control and predictability while increasing retention and conversion for the product.

 Key takeaway:

The first and most urgent problem to solve is **eliminating surprise renewals through proactive reminders and clear spend visibility**, because it directly drives user trust, adoption, and habit formation.

Tab 4

1 Problem & Goal Summary

Problem Statement:

Urban professionals forget subscription renewals and lack visibility on total recurring spend, leading to surprise charges and financial anxiety.

Goal Statement:

To help users manage, visualize, and control all their recurring subscriptions through timely reminders, insights, and a privacy-first experience.

Outcomes (User + Business):

- Users regain control over monthly cash flow → feel more financially confident.
 - Timely renewal alerts → fewer unwanted auto-charges → higher satisfaction.
 - Increased retention through habit formation → sustainable business growth.
-

2 Functional Requirements

ID	Feature	Description	Priority	Example Interaction
F1	Login/Signup	Secure sign-in via Google or email	H	User signs in with Gmail → redirected to dashboard
F2	Add Subscription	Add subscription name, cost, billing cycle, next renewal date	H	Click "+ Add Subscription" → fill form → Save
F3	Dashboard Overview	View total monthly/annual spend, upcoming renewals, insights	H	User sees pie chart + list of subscriptions

F4	Renewal Reminder	Automated or manual reminders before renewal	H	3 days before renewal → in-app + email notification
F5	Edit/Delete Subscription	Modify or remove subscription details	M	Click on item → edit/delete
F6	Spending Insights	Visualize total spend, category-wise breakdown	M	“Insights” tab → view spending graph
F7	Manual-First Privacy Mode	User can manage without connecting bank data	H	Toggle “Manual Mode” in Settings
F8	Settings & Notifications	Customize reminder frequency, channels (email/SMS/in-app)	M	Choose “7 days before” alert preference
F9	Multi-Device Sync	Access from desktop/mobile browsers	M	Auto-sync via Supabase authentication
F10	Feedback / Support	Simple form to send feedback	L	Click “Feedback” → submit form

Stretch Goals (v2):

- **S1:** Smart Auto-Detection — Scan SMS/email for subscription keywords.
 - **S2:** Shared Subscriptions — Manage family or team subscriptions collaboratively.
-

3 Front-End Architecture (User Interface Layer)

Screen	Purpose	Key Actions	Data Displayed
Login / Signup	Authenticate user	Sign in via Gmail or Email	N/A
Onboarding (optional)	Introduce app features	Swipe-through tutorial	Quick intro cards
Dashboard	Overview of total spend & upcoming renewals	Add/edit/delete subscription	Subscription list, spend summary, alerts
Add Subscription	Capture subscription details	Enter name, price, cycle, next date	Input fields + save confirmation
Insights / Analytics	Visualize spend trends	Filter by month/category	Charts of spend distribution
Reminders Page	View all upcoming renewals	Filter by month/category	Charts of spend distribution
Settings	Manage profile, reminders, theme	Change alert timing, enable privacy mode	Notification settings, privacy toggles

Navigation Flow:

Login → Dashboard → Add Subscription → Reminder Set → Insights → Settings

4 Back-End Architecture (Logic, API & Data Flow)

Component	Function	Example API/Service	Trigger	Output
Authentication	Secure user login	Supabase Auth / Firebase Auth	User login attempt	Session token

Database	Store subscriptions, user preferences	Supabase / Firebase Firestore	Add/Edit/Delete action	Data stored
Reminder Service	Send renewal notifications	Twilio (SMS) / SendGrid (email) / Cron job	X days before renewal	Alert sent
Dashboard Logic	Fetch and calculate total spend	Supabase query	Page load	Spend summary
Analytics Engine	Generate insights (monthly, yearly)	Custom script / Supabase functions	User view Insights	Chart data
Feedback Handler	Collect feedback	Supabase table	Feedback submitted	Record saved

Data Entities:

- **User:** ID, Name, Email, Preferences
- **Subscription:** ID, UserID, Name, Amount, Category, RenewalDate, Frequency
- **Reminder:** ID, SubscriptionID, NotifyDate, Status
- **Settings:** Reminder Timing, Notification Type, Privacy Mode

5 Non-Functional Requirements

Aspect	Requirement
Usability	Core actions (add/view/edit subscription) < 3 clicks
Performance	Dashboard loads within 2 seconds for ≤ 100 subscriptions

Security	Auth via Google or email; encrypted user data in Supabase
Privacy	No mandatory bank linking; manual mode by default
Scalability	Handle up to 1,000 active users in MVP
Reliability	Daily database backup on Supabase
Accessibility	Mobile-responsive design; WCAG-compliant contrast
Localization	INR currency default; English interface initially

6 Integration & Compatibility

Tool / Platform	Function
Lovable / Bolt	No-code UI generation (front-end)
Supabase	Database + Auth + Reminder scheduling
Twilio / SendGrid	SMS/Email reminder APIs
OpenAI GPT API (optional)	Generate smart summary insights (“Top 3 expenses this month”)
Replit / Vercel / Netlify	MVP hosting and deployment

7 Constraints & Assumptions

In Scope:

- Manual subscription tracking and renewal alerts
- Dashboard with spend visualization
- User authentication and settings

Out of Scope (for MVP):

- Auto-bank linking
- Family/shared plans
- Advanced analytics or AI detection

Assumptions:

- Supabase backend and Twilio API accessible
- Users have stable internet connection
- Users primarily in India (INR currency default)

8 Success Metrics for MVP

Metric	Target	Why It Matters
User Sign-ups	100+ in first month	Validates product interest
Subscription Add Rate	Avg. 3+ subscriptions/user	Indicates early adoption
Alert Engagement	>50% users act on alerts	Core value delivery
Retention (30-day)	>30%	Confirms stickiness & satisfaction

9 PRD Summary

The product will enable urban professionals to **track, manage, and receive reminders** for all recurring subscriptions through a privacy-first, easy-to-use web app.

It will include **6 key front-end screens** (Login, Dashboard, Add Subscription, Insights, Reminders, Settings) and **5 back-end components** (Auth, Database, Reminder Service, Dashboard Logic, Feedback Handler), powered by **Supabase, Twilio, and Lovable**.

The MVP prioritizes **subscription management, reminders, and spend visibility**, ensuring fast load times, secure data, and high usability.

Key takeaway:

The most critical feature to build first is the **renewal reminder engine** — it delivers the “aha” moment by solving the user’s core pain (unexpected renewals) and establishes immediate perceived value.

Tab 5

1 Mission, Vision & Product Philosophy

Mission (Now):

To help urban professionals effortlessly track, manage, and stay ahead of recurring subscriptions — avoiding surprise renewals and financial anxiety.

Vision (Future):

To make financial clarity and control a daily habit for every digital consumer in India — transforming how people relate to money in the subscription economy.

Product Philosophy:

We believe **financial control should feel simple, not stressful**. By combining minimal design, smart alerts, and privacy-first choices, users can stay informed without being overwhelmed.

2 Brand Attributes — What We Stand For

Attribute	What It Means	How It Shows Up in Design
Empowering	Helps users feel in charge of their finances	Clear CTAs, intuitive flows, and positive reinforcement text
Calm	Reduces anxiety about money	Soft gradients, neutral backgrounds, balanced whitespace
Transparent	No hidden features or manipulative design	Simple layouts, visible settings, no dark patterns
Reliable	Users trust alerts and data accuracy	Consistent reminder timing, clean typography, readable hierarchy
Modern-Minimal	Feels sleek and intelligent	Use of crisp icons, card-based dashboard, muted accent colors

How users should feel:

Confident, clear-headed, and in control — like they’ve finally “tamed the chaos” of digital subscriptions.

3 User Value Proposition (UVP)

“For budget-conscious professionals, **SubSentry** is a smart subscription tracker that brings clarity and control over recurring expenses — unlike generic expense apps, it’s built specifically for India’s growing subscription lifestyle with a focus on privacy and proactive reminders.”

4 Design Principles (The Product’s Creative DNA)

Principle	Description	Example in UI
Clarity First	Every screen has one clear purpose — no clutter or confusion.	Dashboard highlights upcoming renewals as the top focus.
Trust by Design	Respect user privacy and earn confidence through transparency.	Manual-entry option clearly marked as “No bank data needed.”
Speed of Action	Enable users to finish key tasks within 3 clicks.	Muted tones, plenty of white space, rounded cards.
Visual Calm	Use design to reduce financial anxiety.	Muted tones, plenty of white space, rounded cards.
Guided Empowerment	SubSentry acts like a mentor, not a machine.	Microcopy such as “You’re one step ahead this month.”
Delight through Simplicity	Tiny joyful touches make the experience memorable.	Subtle animation when a renewal reminder is set successfully.

5 Visual & Interaction Style Guide

Color Tone:

- Palette: **Cool neutrals (white, slate, soft teal, gentle blue accents)**
- Purpose: Create a sense of calm and trust, avoiding “finance app” heaviness.

Typography:

- **Primary Font:** Inter or Poppins — modern, sans-serif, highly legible.
- **Tone:** Friendly yet professional, mirroring an approachable financial companion.

UI Layout Style:

- Clean card-based layout with subtle elevation.
- Dashboard organized into three logical zones: Total Spend • Upcoming Renewals • Insights.
- No unnecessary graphs — just elegant summaries.

Interaction Feel:

- Smooth fade and slide transitions.
- Subtle micro-animations (e.g., checkmark when subscription added).
- Haptic feedback (on mobile) for actions like “Save Subscription.”

Reflection of Persona:

Aarav (the persona) values **clarity and minimalism**, so the UI uses open space, light color contrasts, and humanized text for reassurance instead of corporate language.

6 Brand Voice & Tone

Situation	Tone	Example Phrase
Onboarding	Warm, reassuring, encouraging	"Welcome to SubSentry — your smarter way to stay in control of subscriptions."
Reminder Alert	Informative yet calm	"Heads up, Aarav — Netflix renews in 3 days. Want to continue or pause?"
Error State	Empathetic and helpful	"Something didn't save right — let's try again, no data lost."
Success State	Cheerful, validating	"All set! Your reminder is ready — no more surprise renewals."
Insights View	Reflective and supportive	"You spent ₹2,450 this month — great job keeping things under control."

Guiding Rule:

👉 "Talk like a calm financial friend — informative, not intimidating."

7 Brand Story (Emotional Narrative)

We built **SubSentry** after watching young professionals around us struggle to manage dozens of recurring payments — from OTT apps to software tools. Every month, a few unnoticed renewals slipped through, creating frustration and guilt. They didn't need another budget spreadsheet; they needed clarity and calm.

SubSentry was created to bring peace of mind to the modern subscription lifestyle — a place where users can see, plan, and decide with confidence. Our mission is to make financial awareness simple, elegant, and empowering — one reminder at a time.

8 PRD Summary (for “Brand & Experience” Section)

SubSentry is designed to feel **calm, empowering, and transparent**.

It helps **urban professionals** gain visibility and control over their recurring subscriptions through **a clean, intuitive dashboard and proactive renewal alerts**.

The tone is **warm, confident, and helpful**, guided by design principles of clarity, trust, and simplicity.

The experience should leave users feeling **in control, supported, and financially aware** — turning financial anxiety into effortless confidence.

Key takeaway:

Every interaction with **SubSentry** should feel like a moment of calm clarity — a gentle reminder that the user, not their subscriptions, is in control.

Tab 6

1 Prototype Scope

The prototype will include **7 key screens**:

- 1 Login / Signup
- 2 Dashboard
- 3 Add Subscription
- 4 Subscription Detail
- 5 Reminder Setup
- 6 Settings / Profile
- 7 Success Confirmation

Each screen follows **SubSentry's vibe**: calm • empowering • transparent • modern-minimal.

Color tone – soft neutrals with teal & blue accents.

Font – Inter / Poppins (rounded edges, clean layout).

2 Screen Prompts

Screen 1 – Login / Signup

Goal: Let users sign in securely and start managing subscriptions.

Key Elements: App logo, tagline (“Clarity for Every Renewal”), Google login button, email field, “Continue” CTA, privacy note.

Tone & Emotion: Welcoming + trust-building.

Style Notes: White background, teal CTA button, rounded input fields.

Prompt (≤250 words):

“Design a welcoming login screen for **SubSentry**, a calm subscription-tracking app. Include logo at top, tagline ‘Clarity for Every Renewal,’ and two options: ‘Continue with Google’ and ‘Sign in with Email.’ Use soft white background, teal primary button, and Poppins font. Add a minimal footer link ‘Privacy & Data Policy.’ The layout should feel secure, light, and focused on ease of entry.”

Screen 2 – Dashboard

Goal: Give users an overview of total spend and upcoming renewals.

Key Elements: Header (“Hi Aarav”), cards for Total Monthly Spend & Upcoming Renewals, table of subscriptions, CTA ‘+ Add Subscription,’ alert section for renewals.

Tone & Emotion: Calm + empowering.

Style Notes: Card-based grid, soft gray background, teal accents for CTA.

Prompt:

“Design a modern-minimal **dashboard** for SubSentry showing total monthly spend, upcoming renewals, and subscription list. Use three summary cards (‘Total Spend,’ ‘Next Renewal,’ ‘Active Subscriptions’). Include a main CTA ‘+ Add Subscription’ at top right. Display list with name, amount, renewal date, and edit icon. Color palette white/slate/teal, Inter font, rounded cards. Keep tone clean and confident.”

Screen 3 – Add Subscription

Goal: Let users quickly log a new subscription.

Key Elements: Input fields (name, cost, renewal date, frequency, category), dropdown for alert timing, ‘Save Subscription’ CTA.

Tone & Emotion: Simple + focused.

Style Notes: Single-column form, white background, teal button, gentle shadow on form card.

Prompt:

“Design an **Add Subscription** form for SubSentry. Include fields for Name, Amount, Billing Cycle (dropdown Monthly/Yearly), Next Renewal Date, Category (OTT, Gym, Software), and Reminder Timing (3 / 7 days before). Add primary button ‘Save Subscription.’ Use soft neutral background, teal CTA, and rounded input boxes. Keep layout minimal and accessible within one scroll.”

Screen 4 – Subscription Detail

Goal: Show all info about one subscription + edit/delete options.

Key Elements: Header with service logo (optional icon), cost, billing cycle, next renewal, notes section, buttons ‘Edit’ & ‘Delete.’

Tone & Emotion: Informative yet calm.

Style Notes: Light gray background, white info card with teal highlights.

Prompt:

“Design a **Subscription Detail** page for SubSentry. Display service name & logo at top, then fields for amount, renewal date, frequency, and notes. Include two buttons ‘Edit’ and ‘Delete Subscription.’ Add subtle divider and mini summary text like ‘Renewing in 3 days.’ Keep design calm and organized with soft neutrals and rounded edges.”

Screen 5 – Reminder Setup

Goal: Let users customize renewal alerts.

Key Elements: Toggle switches (email / SMS / in-app), dropdown for alert timing, 'Save Preferences' button.

Tone & Emotion: Supportive + assuring.

Style Notes: Teal switch controls, white cards with soft drop shadow.

Prompt:

"Design a **Reminder Setup** screen for SubSentry where users select notification methods (email, SMS, in-app) and timing (1–7 days before). Include toggle switches and a 'Save Preferences' CTA at bottom. Use Poppins font, white background, teal highlights, and clear labels. Keep tone encouraging and easy to scan."

Screen 6 – Settings / Profile

Goal: Manage account, privacy mode, and notifications.

Key Elements: Profile card with user name/email, Privacy toggle (Manual Mode ON/OFF), Manage Reminders link, Logout button.

Tone & Emotion: Transparent + trustworthy.

Style Notes: Minimal two-section layout, muted gray background, simple icons.

Prompt:

"Design a **Settings** page for SubSentry showing profile info (name, email), Privacy Mode toggle (Manual Mode ON/OFF), Notification settings, and Logout CTA. Use neutral background with teal accents, rounded cards, and clear labels. Keep tone reassuring with text like 'Your data stays private — always.'"

Screen 7 – Success / Confirmation

Goal: Celebrate a completed action (e.g., subscription added or reminder set).

Key Elements: Checkmark icon animation, confirmation message, CTA 'Back to Dashboard.'

Tone & Emotion: Cheerful + affirming.

Style Notes: White background, teal accent icon, soft drop shadow.

Prompt:

"Design a **Success Confirmation** screen for SubSentry that shows a large animated checkmark and message 'All set! Your reminder is active.' Include primary button 'Back to Dashboard.' Keep colors light and refreshing (white with teal accent). Tone should feel positive and rewarding."

3 Screen Flow (Navigation Logic)

Login → Dashboard → [Click “+ Add Subscription”] → Add Subscription Form → [Save → Success Screen] → Dashboard

User can tap any subscription → Subscription Detail → Reminder Setup or Edit.

Settings accessible via top-right icon on Dashboard.

Transitions should fade smoothly; modals slide up for add/edit forms.

4 Visual Priority

Screen	Primary User Action
Login	Sign in securely
Dashboard	Check total spend & next renewals
Add Subscription	Save new subscription
Subscription Detail	Edit or delete entry
Reminder Setup	Edit or delete entry
Settings	Save alert preferences
Success	Return to dashboard

5 Accessibility & Design Integrity Notes

- Minimum font size 14 px, clear contrast (WCAG AA).
 - Same teal CTA color across app.
 - Consistent 8 px corner radius for buttons and cards.
 - Friendly microcopy (“You’re on top of your subscriptions!”).
 - All icons use outline style for visual unity.
-

6 Deliverable Summary for PRD

The prototype includes **7 interactive screens** representing the complete user journey from login to renewal confirmation.

Each screen adheres to SubSentry's brand attributes — **calm, empowering, transparent, modern-minimal** — with soft teal accents and rounded cards.

The flow prioritizes clarity and efficiency, enabling key tasks (add, view, or manage subscriptions) in ≤ 3 clicks.

This prototype is optimized for usability, visual consistency, and emotional reassurance.

Key takeaway:

The prototype should evoke **calm confidence** — every interaction reminds users that they are in full control of their subscriptions and spending.

SubSentry App Design Overview :

Tab 8

Lovable-Ready Front-End Generation Prompt

You are a **Lovable AI Builder** that generates a complete, functional front-end interface for my MVP product.

Build a cohesive, modern, and interactive web app that fully represents the following concept.

Context

Product Name: SubSentry

Product Description:

SubSentry is a calm, privacy-first web app that helps users **log, track, and manage all recurring subscriptions** — offering proactive renewal reminders, clear monthly spend insights, and a minimal, trustworthy experience.

Primary Persona:

Aarav, 28 — a digital marketing professional from Bengaluru who wants **financial clarity and peace of mind** by staying ahead of recurring subscriptions and avoiding surprise auto-renewals.

Core Problem Solved:

Urban professionals juggle multiple recurring charges (OTT, SaaS, gym, courses) but lack visibility and reminders, leading to overspending and stress. SubSentry consolidates everything into one calm, empowering dashboard.

Brand Tone: Calm • Empowering • Transparent • Modern-Minimal

Color Palette:

- Primary: Teal (#2EB5A3)
- Secondary: Gentle Blue (#4C89E3)
- Neutral: White (FFFFFF), Slate Gray (#F4F6F8)

Font Style: Inter or Poppins — sans-serif, round edges, clean line spacing.

UI Style: Minimal, card-based layout with rounded corners, soft shadows, and generous whitespace to evoke calm and clarity.

Front-End Screens to Generate

Generate these **7 connected screens** in one flow:

1. **Login / Signup Page** – Secure Google/email login with calm introduction.
2. **Dashboard (Home)** – Overview of total monthly spend, active subscriptions, upcoming renewals.
3. **Add Subscription Form** – Form for adding subscription details (name, price, renewal date, frequency, alert timing).
4. **Subscription Detail View** – Individual subscription breakdown with edit/delete options.
5. **Reminder Setup Page** – Configure notification method (email/SMS/in-app) and timing (3–7 days before).
6. **Settings / Profile Page** – Manage privacy, notification settings, and account info.
7. **Success / Confirmation Screen** – Celebrate when a reminder is set or a subscription is saved.

Requirements:

- Consistent nav bar (Dashboard, Add Subscription, Settings).
- Back button on all secondary screens.
- 1 clear CTA per screen (“Save,” “Add Subscription,” “Set Reminder”).
- Smooth transitions and clear visual hierarchy.

2 Design Style & Layout Instructions

Layout: Responsive web app with a card-based dashboard.

Navigation: Top bar with brand name “SubSentry,” side nav icons for Dashboard, Add, Settings.

Design Style: Calm minimalism — balanced whitespace, rounded edges, and light drop shadows.

Primary Color: Teal (#2EB5A3)

Secondary Color: Blue (#4C89E3)

Buttons: Rounded rectangles with hover fade transitions.

Icons: Lucide / Material (outline style).

Typography: Inter (16–24px hierarchy: H1 > H2 > body text).

Alignment: Left-aligned text, right-aligned primary CTAs.

3 Flow & Navigation Logic

Login → Dashboard → [+ Add Subscription] → Add Form → [Save → Success Screen] → Dashboard

From Dashboard → click on any subscription → **Subscription Detail View** → “Edit” or “Delete.”

From Subscription Detail → access **Reminder Setup** → set alert → **Success Screen**.
Settings accessible via top-right icon on all screens.

After confirmation → automatically return to Dashboard.

Transitions: soft fade or slide animation between screens.

4 Required Functionality (Front-End Logic Only)

Component	Description
Buttons	Interactive CTAs with hover and click states.
Cards on Dashboard	Show sample data placeholders: Total Spend, Active Subs, Upcoming Renewals.
Add Subscription Form	Input fields for Name, Amount, Renewal Date, Category, Reminder Timing.
Reminder Setup	Toggles for Email/SMS/In-App + dropdown for timing.
Success Screen	Checkmark animation with “All set!” message + Back to Dashboard CTA.

(Front-end logic only — no backend or API integration required.)

5 Text & Microcopy Guidelines

Tone: Supportive • Human • Reassuring

State	Example Microcopy
Success	You’re all set — your reminder is active!”
Empty	“No subscriptions yet. Let’s add your first one.”

Loading	"Fetching your subscriptions — one moment."
Reminder Alert	"Netflix renews in 3 days — want to continue or cancel?"

Avoid robotic or negative phrasing; every message should inspire calm confidence.

6 Accessibility & Usability

- Minimum font size: 14px.
 - CTA color contrast $\geq 4.5:1$.
 - Tab navigation enabled across all forms.
 - Alt text for icons (e.g., "Add subscription," "Edit entry").
 - All actions ≤ 3 clicks from the dashboard.
-

7 Output Expectations

- Generate **7 complete, linked screens** with top nav and consistent layout.
 - Apply full **color palette, font, and tone** consistently.
 - Use card-based dashboard design with modern micro-interactions.
 - Include hover animations, fade transitions, and soft success states.
 - Show sample data to demonstrate flow and readability.
-

8 PRD Summary (for Documentation)

The Lovable front-end for **SubSentry** includes **7 interactive screens** covering login, dashboard, subscription entry, reminder setup, and settings.

The UI follows the **calm, empowering, transparent** brand identity using a soft teal-and-blue palette and Inter typography.

Navigation is intuitive, enabling all core actions (add, edit, set reminder) within 3 clicks.

The design ensures clarity, accessibility, and emotional reassurance for first-time users.

 Key takeaway:

Every pixel in SubSentry's front-end should evoke **calm control** — making users feel empowered, organized, and one step ahead of every renewal.

Tab 9

Backend & Authentication Setup – SubSentry

Context

Product Name: SubSentry

Purpose: A calm, privacy-first web app that helps users log, track, and manage all recurring subscriptions with proactive renewal reminders and clear monthly spend insights.

Core Features:

1. Add / Edit / Delete Subscriptions
2. Dashboard overview (total spend + renewals)
3. Renewal Reminder scheduling
4. Privacy settings (manual vs. auto mode)
5. Account & preferences management

Primary User: Aarav, 28 — a digital marketing professional managing multiple OTT, SaaS, and gym subscriptions who seeks financial clarity and calm control.

Authentication: Gmail login (OAuth via Supabase Auth)

Tech Stack: Supabase (Auth + DB + Edge Functions) + Lovable Front End + optional Gmail/Gemini API for reminders.

Setup Overview

Authentication

- Enable **Supabase Auth** with **Google OAuth** (no passwords).
- Store user profile info in **users** table linked by **user_id**.
- Upon first login, auto-create a profile row in **users**.

Database Tables

Table	Key Columns	Relationships	Purpose
users	id, name, email, created_at	Primary key	Store Gmail-authenticated users
subscriptions	id, user_id, name, amount, renewal_date, frequency, category, reminder_timing, status	user_id → users.id	Store all user subscriptions
reminders	id, subscription_id, scheduled_date, status	subscription_id → subscriptions.id	Track reminder triggers
settings	id, user_id, privacy_mode, notification_type, reminder_frequency	user_id → users.id	Store user preferences (manual vs. linked mode)

Table Creation (SQL Reference):

```
-- USERS
create table users (
  id uuid primary key default uuid_generate_v4(),
  name text,
  email text unique,
  created_at timestamp default now()
);
```

```
-- SUBSCRIPTIONS
create table subscriptions (
  id uuid primary key default uuid_generate_v4(),
  user_id uuid references users(id),
  name text,
  amount numeric,
  renewal_date date,
  frequency text,
  category text,
  reminder_timing integer default 3,
  status text default 'Active',
```

```
    created_at timestamp default now()
);

-- REMINDERS
create table reminders (
  id uuid primary key default uuid_generate_v4(),
  subscription_id uuid references subscriptions(id),
  scheduled_date date,
  status text default 'Pending',
  created_at timestamp default now()
);

-- SETTINGS
create table settings (
  id uuid primary key default uuid_generate_v4(),
  user_id uuid references users(id),
  privacy_mode boolean default true,
  notification_type text default 'Email',
  reminder_frequency text default 'Weekly',
  created_at timestamp default now()
);
```

2 Authentication & Access Flow

Login:

Users sign in using Gmail (Supabase OAuth).

Session Management:

Supabase provides secure JWT tokens for client sessions.

Access Control:

All data queries are filtered by `user_id` to ensure privacy and isolation.

Logout:

Session invalidated via Supabase `signOut()` method.

Example Flow:

Login with Google → Supabase Auth Token → Fetch Dashboard → Load subscriptions where `user_id = current user`.

3 API Endpoints (for Front-End Calls)

Endpoint	Method	Description	Table	Auth
/getSubscriptions	GET	Fetch all subscriptions for a user	subscriptions	✓
/addSubscription	POST	Add a new subscription record	subscriptions	✓
/updateSubscription	PUT	Edit subscription details	subscriptions	✓
/deleteSubscription	DELETE	Remove a subscription	subscriptions	✓
/scheduleReminder	POST	Add reminder entry	reminders	✓
/getSettings	GET	Fetch user preferences	settings	✓
/updateSettings	PUT	Update preferences	settings	✓

Implementation:

Use Supabase Edge Functions to wrap CRUD logic for each table, ensuring row-level security (RLS).

4 Integration with Gmail (Optional AI/Automation Layer)

Purpose: Automatically send polite renewal reminders or “spend summaries.”

Integration Flow:

1. Trigger: Reminder date = today (via Supabase cron job or function).
2. Generate message using **Gemini or GPT API** prompt:

“Write a short, friendly renewal reminder for [subscription name], amount ₹[X], due on [date]. Signed by [user name].”

3. Send email through **Gmail API** using user’s authenticated account.
4. Update `reminders.status = 'Sent'`.

Example Code (Edge Function Snippet):

```
if (today == reminder.scheduled_date) {  
  const emailBody = await generateEmail(subscription.name, subscription.amount,  
    subscription.renewal_date);  
  await sendGmailEmail(user.email, emailBody);  
  await supabase.from('reminders').update({ status: 'Sent' }).eq('id', reminder.id);  
}
```

5 Example Supabase Table Definitions (Ready for SQL Runner)

(Already shown above in detail — all tables include timestamps and relationships.)

Add **Row-Level Security (RLS)** on each table:

```
alter table subscriptions enable row level security;  
create policy "Users can access own data"  
on subscriptions for all using (auth.uid() = user_id);
```

Repeat for `reminders` and `settings` tables.

6 Security & Non-Functional Guidelines

Security Controls:

- RLS active for all tables.

- HTTPS encryption enforced on all endpoints.
- Supabase Auth tokens validated on each request.
- Email verification enabled in Supabase settings.

Performance:

- Expected latency: <200 ms per request.
- Auto daily backups enabled.

Reliability & Scalability:

- 5K active users supported during MVP phase.
- Scheduled jobs (reminders) run daily via Supabase cron.
- Logging via Supabase Functions console for debugging.

7 PRD Summary (for Tech Architecture Section)

The backend for **SubSentry** is powered by **Supabase**, providing secure Google OAuth authentication and relational data management for users, subscriptions, reminders, and settings.

Supabase Edge Functions expose REST APIs for all CRUD operations while maintaining strict row-level security.

Optional Gmail/Gemini integration enables automated, AI-generated renewal reminders.

The architecture emphasizes simplicity, data privacy, and scalability — ensuring seamless sync between the Lovable front end and the database backend.

Key takeaway:

SubSentry's backend achieves full end-to-end functionality by combining **Supabase Auth for Gmail login** with **automated reminder logic**, ensuring every renewal reminder feels effortless, accurate, and secure.
